How to press the keys to find the parameters

Level 1 Press "SET" to enter "SV" Setting mode set the value through " <R/S " " ⇛ " and " ⇚ "

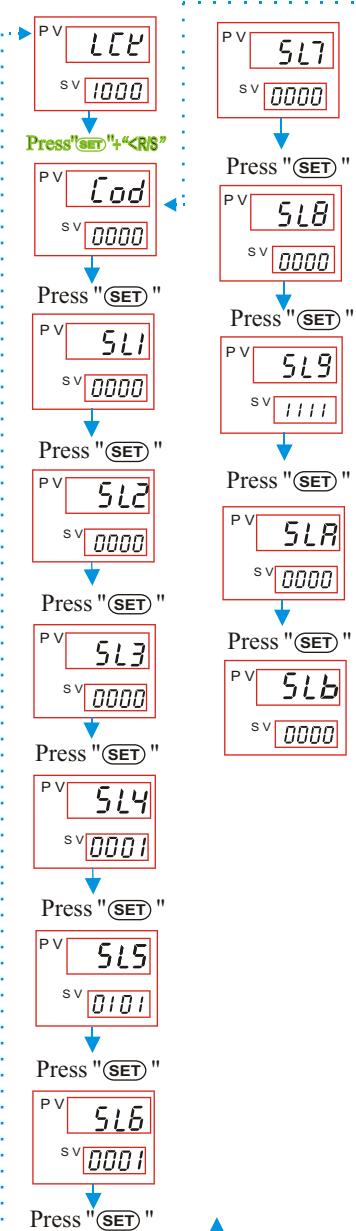

Level 2

Press "SET" 3 seconds

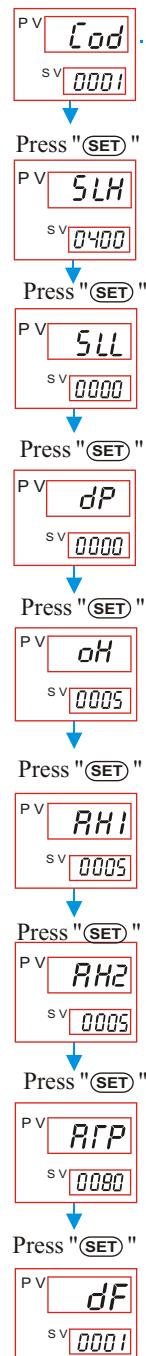

Level 3

When $LcP=1000$,
press "SET"+"<R/S"
to enter Level 3 parameter
setting mode.

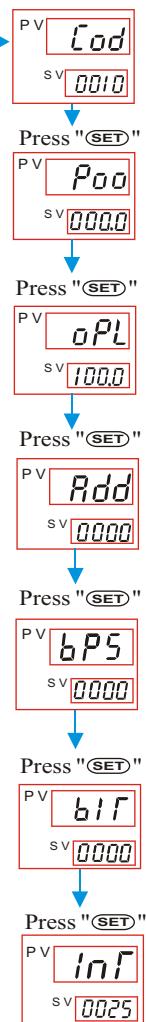

Level 4

When $Cod=0001$,
press "SET" to enter
Level 4 parameter
setting mode

Level 5

When $Cod=0010$, press "SET"
to enter Level 5 parameter
setting mode

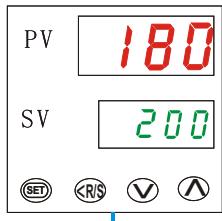

To show output power percentage

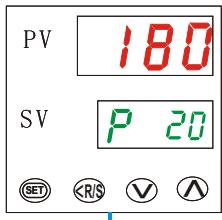

Under Auto controlling,
Press **V** to show the output
power percentage.

For example:

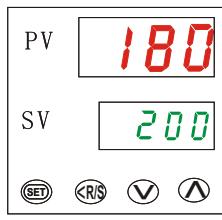

Press **V** key

The precentage is
caculated by PID

Press **V** key again
back to set point
displaying mode

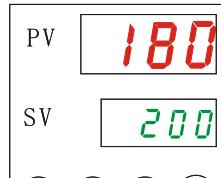

Auto/Manual mode selection

To use this function, please set
S18 parameter to turn on this
Auto/Manual mode selection option

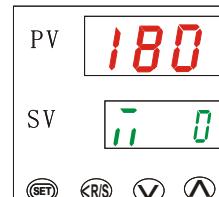

Press "**<R/S**" Key 3 seconds
to select auto/manual mode.

For example:

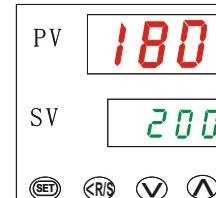

Auto mode

Press "**<R/S**" 3 seconds

Manual mode
output is "0"
press "V" "A" to
select the output
setpoint

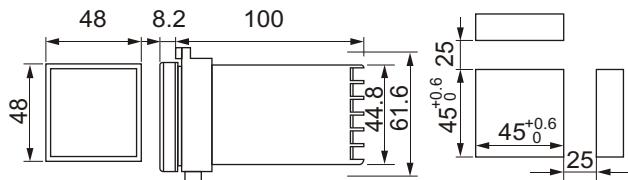

Press "**<R/S**" 3 seconds
Again back to Auto mode

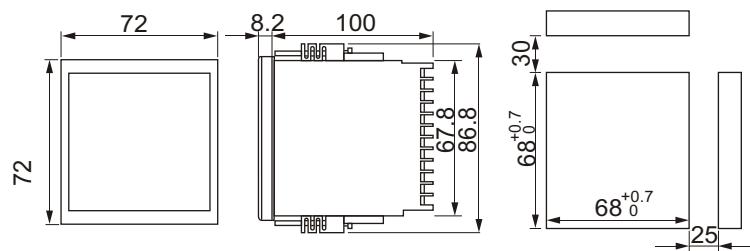

Auto mode
